Construction Site Safety
Everyone must do their part!

The BASICS (for one and all)

- Always follow the established safety rules.
- Always wear your personal protective equipment.
- Before you start each job, think about the safe way to do it.
- When something looks unsafe, check it out beforehand.
- When you know something is unsafe, tell your supervisor, DON'T do it anyway.
- Don't rush through work.
- Look out for others around you and remind them if they forget safe practices.
- Take your tool box talks and other training seriously.

Good Supervisors are the KEY.

- Know the Company's safety rules and policies.
- Always follow those rules personally while on the job.
- Always be on the lookout for hazards on your site.
- Always correct hazards as soon as they are observed.
- Perform a self-audit of the worksite at the beginning of each shift.
- Always have the appropriate equipment for the job.
- Make sure your employees know and follow the safety rules.
- Use the disciplinary policy for safety when appropriate.
- Never use the saying "not my problem" when dealing with safety hazards on a work site.
